Monthly Plans and Progress Report

September 1973

During the month of September the team was involved in two particular activities. One was the completion of ground truth activities in the field. The second was coordination with NASA Johnson Space Center regarding possible data takes. Because of the shifting track, decisions had to be made regarding locations as well as dates. Bad weather resulted in two cancellations of proposed data takes (September 8 and 13). On September 18 there was an attempted data take but cloud cover greatly exceeded acceptable limits. Dr. Gene Safir participated in an international symposium and discussed the topic, "Infrared Fluorescence of Corn Leaves Infected by *Helminthosporium Maydis*."

Work continues in analysis of available data and planning for analysis of SL-3 data.
